# Quality and environmental policy

- All employees have a responsibility for our work with quality and environmental impact. With our shared commitment we will reach our goals and create added value for our customers.

- At Axess Logistics we strive to reduce lead-times, make operations more efficient and improve processes and services. With our flexibility, we create good customer unique services, and through efficient logistics solutions, we create added value for our customers in many ways.

- Compliance with laws and the requirements that concern our operations is a matter of course for us. To reduce impact on air quality we strive to prevent pollution in our operations, primarily by measures to decrease emissions into the atmosphere from our transports and facilities. We also take measures to reduce emissions of metals into waste water.
